

LUISE®

BIG 10" Filter Housing and Cartridges

A	D	H
1" BSP	130mm	315mm

Luise Water Filters are available in 10" Housings that take 2.5" diameter cartridges.

We carry a range of cartridges in materials suitable for the removal of sediment, particulates and unpleasant tastes and odours eg. chlorine

Cartridge materials include Pleated Paper, Melt Blown Polypropylene, Fibre Wound, Washable Polyester Mesh and Carbon. Micron sizes for elements range from 1-100

Luise Safety Valve

Luise 'BIG' is a filter made up of 3 parts and constructed in non-toxic plastic material. It can be provided with a vast range of cartridges, which guarantee both a mechanical and chemical filtration, according to the kind of cartridge.

The filter may be subject to sudden overpressure, beyond the maximum pressure allowed (7 bars). So we strongly suggest using the safety valve (Item # 550.0000) to avoid damaging the filter structure (breakage or bursting).

Damages caused by the filter breaking will be considered only if the filters are installed with the safety valve Item # 550.0000. If water filters are installed close to heating bodies it is useful to install a check valve in order to avoid the return of warm water that may damage the filter.

Do not install the filters using green paste or hemp. Use Teflon
